Original sccGAN critic scores for four natural E4.5 conditions

Original critic.pth with condition-specific natural calibration; each blastoid is shown in a distinct color

Violin width shows 2,000 cell-level bootstrap replicates; white dots are point estimates and bars are 95% CIs. PE-like cells are evaluated separately against Pre_VE and PaE; TE-like cells separately against mTE and pTE. All datasets use identical fixed-depth preprocessing and the original 2,000-gene order.
